

# Concurrent Systems

*Nebenläufige Systeme*

XIII. Pickings

Wolfgang Schröder-Preikschat

February 5, 2020

## Agenda

Recapitulation  
Concurrent Systems

Perspectives  
Parallel Systems  
Computing Equipment  
Further Education

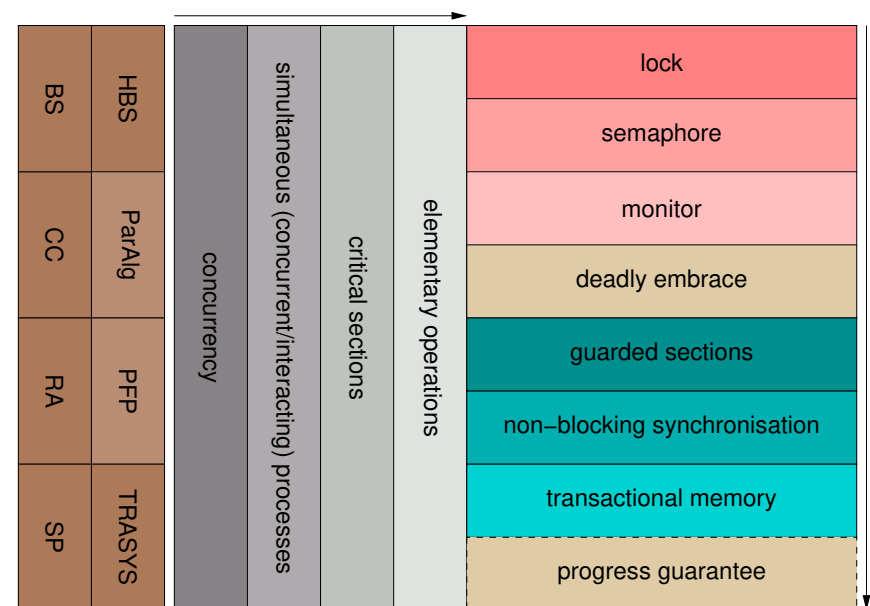

## Outline

Recapitulation  
Concurrent Systems

Perspectives  
Parallel Systems  
Computing Equipment  
Further Education

## Content of Teaching and Cross-References

Recapitulation  
Concurrent Systems

Perspectives  
Parallel Systems  
Computing Equipment  
Further Education

- **composability and configurability**
    - application-oriented (varying, type-safe) system software
  - **specialisation**
    - dedicated operating systems: integrated, adaptive, parallel
  - **reliability**
    - gentle fault and intrusion tolerance
  - **thriftiness**
    - resource-aware operation of computing systems
  - **timeliness**
    - migration paths between time- and event-triggered real-time systems
  - **concurrency**
    - coordination of cooperation and competition between processes
- ↪ “concurrent systems” is more or less **cross-cutting** thereto. . .

## Latency Awareness in Operating Systems

- **latency prevention**
  - lock- and wait-free synchronisation
  - integrated generator-based approach
- **latency avoidance**
  - interference protection
  - race-conflict containment
- **latency hiding**
  - operating-system server cores
  - asynchronous remote system operation
- experiments with different **operating-system architectures**
  - process-/event-based and hardware-centric operating-system kernels
  - LAKE, Sloth
- DFG: 2 doctoral researchers, 2 student assistants

## Coherency Kernel

- **event-based minimal kernel**
  - cache-aware main-memory footprint
  - hyper-threading of latent actions
- featherweight **agreement protocols**
  - overall kernel-level synchronisation
  - families of consistency kernels
- **problem-oriented consistency**
  - sequential, entry, release consistency
  - functional hierarchy of consistency domains
  - memory domains for NUMA architectures
- implementation as to different **processor architectures**
  - partial or total, resp. {in,}coherent shared memory
- DFG: 2 doctoral researchers (1 FAU, 1 BTU)

## Octo

- borrowed from the designation of a creature that:
  - is highly parallel in its actions and
  - excellently can adapt oneself to its environment
- the kraken (species *Octopoda*)
  - can operate in parallel by virtue of its eight tentacle
  - is able to do customisation through camouflage and deimatic displays and
  - comes with a highly developed nervous system
    - in order to attune to dynamic ambient conditions and effects

## POS

- abbrv. for *parallel operating system*
  - an operating system that not only supports parallel processes
  - but that also functions **inherently parallel** thereby
- DFG: 2.5 doctoral researchers, 1 research/3 student assistants

<sup>3</sup><http://univis.uni-erlangen.de> → Research projects → iRTSS

- scalable synchronisation on the basis of **agile critical sections infrastructure**
  - load-dependent and self-organised change of protection against race conditions
- **linguistic support**
  - preparation, characterisation, and capturing of declared critical sections
- automated extraction of critical sections
  - notation language for critical sections
  - program analysis and LLVM integration/adaptation
- power-aware system programming
  - mutual exclusion, guarded sections, transactions
  - dynamic dispatch of synchronisation protocols or critical sections, resp.
- tamper-proof power-consumption measuring
  - instruction survey and statistics based on real and virtual machines
  - energy-consumption prediction or estimation, resp.

- DFG: 2 doctoral researchers, 2 student assistants

<sup>4</sup><http://univis.uni-erlangen.de> → Research projects → PAX

## real-time capable network communication

- transport channel for cyber-physical systems
- predictable transmission latency
- in a certain extent guaranteed quality criteria

## deterministic run-time support

*Auffassung von der kausalen [Vor]bestimmtheit allen Geschehens bzw. Handelns (Duden)*

- latency-aware communication endpoints, optimised protocol stack
- specialised resource management, predictable run-time behaviour
  - in time (phase 1) and energy (phase 2) respect

- DFG: doctoral researchers, 2 student assistants (1 FAU, 1 Uni SB)

<sup>5</sup><http://univis.uni-erlangen.de> → Research projects → LARN

fau4*	clock	cores per domain		domain		
		physical	logical	NUMA	tile
